THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

**IMPORTANT REMINDER:** Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

## DETAILED ACTION

### ***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 1-6 are allowed over the prior art of record.

Independent claim 1 is allowed since the claim recites an information reproduction device, comprising: a frequency difference detection means for detecting a difference in frequencies between a read clock, obtained by applying phase locked loop (PLL) to a reproduction signal read from a recording medium, and a reference clock; an information processing means for performing signal processing on the reproduction signal and outputs a processing status information indicating whether or not the information processing is performed normally; and a frequency monitoring means for monitoring whether or not the frequency of the read clock is normal based on the frequency difference and the processing status information; the frequency monitoring means includes a state determination means for calculating a cumulative count difference value, said frequency monitoring means makes a transition to an OK status indicating that the frequency of the read clock is normal when the processing status information is indicating a normal status based on the cumulative count difference value being lower than an OK status threshold; said frequency monitoring means makes a

transition to a NG status indicating that the frequency of the read clock is abnormal when the processing status information is indicating an abnormal status based on the cumulative count difference value exceeding an NG threshold, and returns to an OK status when the cumulative count difference value is below an OK threshold during the NG status.

Furthermore, the examiner interprets this claim to fall within the provisions of 35 U.S.C.112, 6<sup>th</sup> paragraph. The portion of the specification supporting the claim language is page 7, line 16 through page 13, line 8 that describes the specific structure of the information reproduction device. Therefore, the claim is construed to cover the corresponding structure, material or acts described within the specification.

Claim 2 is allowed as being dependent upon aforementioned independent claim 1.

Independent claim 3 is allowed since the claim recites a read clock monitoring method, comprising: a frequency difference detection step which detects a difference in frequencies between a read clock, obtained by applying phase locked loop (PLL) to a reproduction signal read from a recording medium, and a reference clock; an information processing step which performs signal processing on the reproduction signal and outputs a processing status information indicating whether or not the information processing is performed normally; a frequency monitoring step which monitors whether or not the frequency of the read clock is normal based on the frequency difference and the processing status information; the frequency monitoring step includes calculating a cumulative count difference value by a state determination

circuit, the frequency monitoring step further includes making a transition to an OK status indicating that the frequency of the read clock is normal when the processing status information is indicating a normal status based on the cumulative count difference value being lower than an OK status threshold, making a transition to a NG status indicating that the frequency of the read clock is abnormal when the processing status information is indicating an abnormal status based on the cumulative count difference value exceeding an NG threshold, and returning to an OK status when the cumulative count difference value the difference of the frequencies is below an OK threshold during the NG status.

Claim 4 is allowed as being dependent upon aforementioned independent claim 3.

Independent claim 5 is allowed since the claim recites an information reproduction device, comprising: a frequency difference detection device configured to detect a difference in frequencies between a read clock, obtained by applying phase locked loop (PLL) to a reproduction signal read from a recording medium, and a reference clock; an information processing device configured to perform signal processing on the reproduction signal and outputs a processing status information indicating whether or not the information processing is performed normally; and a frequency monitoring device configured to monitor whether or not the frequency of the read clock is normal based on the frequency difference and the processing status information; the frequency monitoring device includes a state determination circuit for calculating a cumulative count difference value, said frequency monitoring device

makes a transition to an OK status indicating that the frequency of the read clock is normal when the processing status information is indicating a normal status based on the cumulative count difference value being lower than an OK status threshold; said frequency monitoring device makes a transition to a NG status indicating that the frequency of the read clock is abnormal when the processing status information is indicating an abnormal status based on the cumulative count difference value exceeding an NG threshold, and returns to an OK status when the cumulative count difference value is below an OK threshold during the NG status.

Claim 6 is allowed as being dependent upon aforementioned independent claim 5.

The closest prior art by Tonami (USPN 6768706) discloses an apparatus that tried to measure the variance of the read clock in relation to the reference clock. Tonami does not disclose an apparatus that changes the system status dependent upon a cumulative count difference value exceeding a threshold during either an OK or NG status.
